Contents

Some Perspectives on Svenders	xi
About the Authors	xiv
Preface	xvii
Acknowledgments	xxi
 Chapter 1: Wave Motion	 1
Introduction	1
Wavefronts and raypaths	4
d'Alembert's solution	4
One-dimensional waves	5
Sinusoidal waves	7
Phase velocity	11
Wave pulses	13
Geometric seismology	13
The speed of light	16
Huygens' principle	17
Reflection and refraction	20
Ray theory	23
Fermat's principle	24
Fermat's principle and reflection and refraction	28
Diffraction	30
Analogy	34
Appendix A: Exercise	36
References	37
 Chapter 2: Digital Imaging	 39
Reflection seismology	39
Digital processing	42
Signal enhancement	43
Migration	45
Interpretation	48
Rays	49
The unit tangent vector	50
Traveltime	51

vi Contents

The gradient	52
The directional derivative	52
The principle of least time	54
The eikonal equation	57
Snell's law	59
Ray equation	60
Ray equation for velocity linear with depth	62
Raypath for velocity linear with depth	64
Traveltime for velocity linear with depth	66
Point of maximum depth	67
Wavefront for velocity linear with depth	68
Two orthogonal sets of circles	69
Migration in the case of constant velocity	72
Implementation of migration	73
Appendix B: Exercises	76
References	77
 Chapter 3: Visualization	 79
The seismic reflection method	79
Seismic interpretation	80
Porosity	83
Absorption loss and transmission loss	84
The wave equation	85
Wave velocity	89
Velocity analysis	90
Seismic tomography	91
Coherence	93
Appendix C: Exercises	96
References	97
 Chapter 4: Sampling	 99
Time series	99
The wavelet	100
Digitization	101
Frequency	103
Sinusoidal motion	103
Aliasing	105
The Nyquist frequency	107
Sampling geophysical data	110
Appendix D: Exercises	113
References	114
 Chapter 5: Filtering	 117
Digital filtering	117
Convolution	126

Feedback filters	131
Inverse filters	133
Minimum delay	136
Appendix E: Exercises	139
References	140
Chapter 6: Frequency	143
Frequency spectrum	143
Magnitude spectrum and phase spectrum	144
Fourier transform	147
Minimum-phase spectrum	150
Inverse Fourier transform	152
Appendix F: Exercises	154
References	156
Chapter 7: Wavelets	159
Wavelets	159
Fourier transform	161
Z-transform	163
Delay: Minimum, mixed, and maximum	166
Two-length wavelets	166
Illustrations of spectra	169
Delay in general	172
Energy	176
Autocorrelation	178
Canonical representation	182
Zero-phase wavelets	182
Symmetric wavelets	183
Ricker wavelet	185
Appendix G: Exercises	187
References	191
Chapter 8: Synthetics	193
Introduction	193
Polarity	194
Reflection coefficients and transmission coefficients	195
Ghost reflection	197
Layer-cake model	200
Synthetic seismogram without multiples	202
Water reverberations	205
Synthetic seismogram with multiples	207
Examples	210
Small and white reflection coefficients	211
Appendix H: Exercises	215
References	215

Chapter 9: Wavelet Processing	217
Wavelets	217
The shaping filter	220
Spiking filter	223
White convolutional model	225
Wavelet processing	226
All-pass filter	234
Convolutional model	235
Nonminimum-delay wavelet	237
Signature deconvolution	239
Vibroseis	242
Dual-sensor wavelet estimation	243
Deconvolution: Einstein or predictive?	247
Summary	248
Appendix I: Exercises	249
References	250
 Chapter 10: Deconvolution	 253
Model used for deconvolution	253
Least-squares prediction and smoothing	255
The prediction-error filter	258
Spiking deconvolution	260
Gap deconvolution	262
Tail shaping and head shaping	263
Seismic deconvolution	267
Piecemeal convolutional model	268
Time-varying convolutional model	269
Random-reflection-coefficient model	272
Implementing deconvolution	273
Canonical representation	275
Appendix J: Exercises	277
References	286
 Chapter 11: Fine Points	 289
Prediction-error filters	289
Water reverberations	296
Gap deconvolution of a mixed-delay wavelet	298
Prewhitening	301
Prediction distance	303
Model-driven predictive deconvolution	305
Convolutional model in the frequency domain	308
Time-variant spectral whitening	310
Model-based deconvolution	311
Surface-consistent deconvolution	312
Interactive earth-digital processing	314

Appendix K: Exercises	318
References	327
Chapter 12: Attributes	329
Interpretive processing.	329
Seismic attributes.	330
Instantaneous attributes	332
Seismic sequence attribute map (SSAM)	337
Coherence cube (C3).	338
SSAM and C3	340
Appendix L: Design of Hilbert transforms	342
Appendix M: Exercises	345
References	347
Chapter 13: Phase	349
Phase rotation	349
Alternate approaches to phase rotation	355
Band-limiting root approximation.	357
Appendix N: The energy-delay theorem	359
References	361
Chapter 14: Absorption	363
Attenuation	363
Useful attenuation mechanisms.	365
Practical considerations.	370
Appendix O: Exercises	371
References	373
Chapter 15: Input-output Models	375
Introduction	375
Digital linear time-invariant systems.	376
Analog linear time-invariant systems	380
Digital transfer functions.	381
Analog transfer functions	384
Causality and stability of digital systems	386
Causality and stability of analog systems	390
Frequency response of a digital system.	391
Digital prediction.	399
Digital prediction error	406
Analog prediction error	412
References	416
Index	417
