Contents

About the Authors	viii
Preface	xi
Acknowledgments	xv
 Chapter 1: Introduction	 1
Basic concepts of wave-propagation theory	1
Canonical coordinate transformation	1
Nonstationary wave	3
Propagation of a discontinuity	6
Stationary waves	7
The near-front (or high-frequency) approximation	8
Geometric spreading	10
The field of a concentrated source	14
Limitations on the elementary theory	19
Elastic waves in isotropic media	20
Longitudinal and shear waves	20
Law of conservation of the energy flux	24
Reflected/transmitted waves	26
Consideration at interfaces	26
Local plane-interface approximation	26
The reflection/transmission problem	28
Reflected/transmitted rays	31
Snell's law	31
 Chapter 2: Edge Waves as a Solution of the Wave Equation	 33
Edge diffraction	33
The reflection/transmission problem at an irregular interface	33
Diffracted rays	36
Edge wave	37
The geometric theory of diffraction	38

The equation of the boundary layer	40
Neighborhood of the shadow boundary	40
The high-frequency approximation	43
Ray coordinates	44
The boundary layer in ray coordinates	45
The operations ∇A and ΔA	46
The scalar product $\nabla \tau \cdot \Delta A$	48
The equation of the boundary layer	49
Linearly independent solutions	51
Kummer's equation	51
The first solution	52
The second solution	52
The smooth solution	54
The function $W(w)$	54
Edge diffraction in the boundary layer	57
Diffraction formulas	57
Illuminated and shadow zones	59
Young's principle	60
Boundary layer	60
Example of a boundary layer	63
Transverse diffusion	65
Solution in the neighborhood of a ray	70
The neighborhood of a ray	70
Separation of variables	71
Reducing to Kummer's equation	74
Diffraction formulas	76
Secondary illuminated and shadow zones	79
Vertex diffraction	79
Criterion for applicability of asymptotic ray theory	81
Chapter 3: Edge Waves in Boundary Layers	85
The problem of smoothing a discontinuity at a shadow boundary	85
The wavefield pattern considering single diffractions	85
Rational approximation for edge waves	87
The Sohotsky-Plemelj problem	88
Smoothing the discontinuity at a shadow boundary	89
The case of real variable α	92

The smoothing correction as a solution of equations of motion	94
The Cauchy-type integral as a superposition of solutions of equations of motion	94
The smoothing correction as a boundary-layer approximation	95
Vector waves	99
The reciprocity principle	100
Chapter 4: Tip Waves	101
The condition of continuity at the secondary shadow boundary	101
Secondary shadow boundaries	101
Tip wave	103
Domains of continuity	105
Ray coordinates	107
Edge wave as a function of the tip-wave ray coordinates	108
The continuity condition at a secondary shadow boundary	109
Approximations in the neighborhood of the central ray	110
The neighborhood of the central ray	110
The edge-wave eikonal	111
The reflected/transmitted wave eikonal	113
The principle of locality	115
The case of the spherical wave	117
Variables ζ_{mnp} and ρ_{mnp}	120
The edge-wave amplitude	121
Derivation of the asymptotic estimate	123
The edge wave	126
Smoothing the discontinuity at a secondary shadow boundary	129
The condition of periodicity	129
A nonperiodic function	130
The problem of smoothing a discontinuity	131
Summation of the series	133
The smoothing correction as the superposition of solutions of equations of motion	134
The tip wave	135
Function $\Psi(\rho, \zeta)$	136
Diffraction at a vertex	140
Vector waves	144

Chapter 5: Examples and Applications	147
Synthetic seismograms for simple subsurfaces and comparison with physical experiments	148
Diffraction on a half plane	148
Diffraction on a wedge	150
Diffraction on a pinched-out layer	152
Diffraction on a small-throw fault	155
Diffraction on a sector	157
Diffraction on a pyramid	163
Diffraction of the transmitted wave on the dome (after Luneva and Kharlamov, 1990)	165
Implementation in a 2D modeling package	166
Package organization	168
Vertical seismic profiling	172
Seismic survey modeling and processing of synthetic data	175
Normal-incidence profiling (NIP)	178
The tip-wave superposition method	179
Algorithm	180
Implementation and software overview	183
Experimental results	184
Survey design and interpretation of seismic response by the superposition method	190
Summary and recent developments	192
Conclusion	195
References	197
Index	203
